The industrial landscape is evolving. A variety of new careers for those with industry knowledge, a broad spectrum of training and the right skill set are opening up. Exciting experiences and a challenging work life await you.

ELECTRICIAN - 900 Hours

Learn to safely and efficiently install, repair and maintain a wide variety of electrical equipment and applications in industrial, commercial and residential fields. Areas covered will include basic circuitry, AC and DC motors, motor controls, switch relay systems, transformers and lighting systems, as well as the National Electric Code (NEC) and how to read blueprints.

OIL & GAS INSTRUMENTATION TECHNICIAN – 900 Hours

Oil & Gas Instrumentation Technicians monitor, troubleshoot and maintain control and measurement systems and procedures in industrial environments. Program includes training in electrical and instrumentation controls, electrical theory, relay logic and pneumatic instrumentation control systems. Industry safety standards and environmental issues are also covered.

Why Milan Institute?

- Financial Aid For Those Who Qualify
- Employment Services For Graduates
- Experienced, Qualified Instructors
